Transpower advises of HVDC outages for maintenance on the HVDC cable 6. To remove and restore HVDC cable 6, two short Pole 3 outages are required. During the cable 6 outage Pole 3 will be returned to service at a reduced capacity.

During the Pole 3 outage round power will be disabled, preventing HVDC reserve sharing in the reverse power direction below the monopole minimum transfer.

Frequency Keeping Control (FKC) will be disabled for trading periods in which the scheduled HVDC transfer is close to the monopole minimum. No SIR sharing is modelled when FKC is disabled. The System Operator business process for disabling and enabling FKC during HVDC monopole operation is described on the Transpower website at the following link:

A revision of this notice will be issued if there is any change to the situation above.

No CAN will be issued updating the status of FKC for the duration of the work

A revision of this notice will be issued if there is any change to the situation above.
